                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                      Labracted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Jun 29, 2005 this sequence version replaced gi:50540557.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.ed/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig described in dividual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold's and there may be sequence contigs within a contigue scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Sequence 123310, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REPRENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: US/0241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOUTHARE: FRAESEQ for Windows Version 4.0

SEQ ID NO 123310

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

Submitted (17-JUN-2003) MIPS, Ingolstaedter Landstr.1, D-85764

Neuherberg, GERMANY

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer

Research Center (DKF2); Email s.wiemann@dkfz-heidelberg.de;

sequenced by BMFZ (Biomedical Research Center at the

Heinrich-Heine-University, Duesseldorf/Germany) within the CDNA

sequencing consortium of the German Genome Project. This clone

(DKF2D68600215) is available at the RZPD in Berlin. Please contact

the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059

Berlin-Charlottenburg, GERWANY; Email: clone@rzpd.de Further

information about the clone and the sequencing project is available

at http://mips.gsf.de/proj/CDNA/.

Submitted (04-JAN-2005) Biological Chemistry and Molecular Pharmacology, Harvard Institute of Proteomics, 320 Charles St., Cambridge, MA 02141, USA
This CDS clone is a perated by Harvard Institute of Proteomics. This CDS clone has been cloned by Harvard Institute of Proteomics. This ORP clone has been cloned with normalized stop-codon. The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-bual vector. Additional sequences in the clone: 'ACC' after Sall site and

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. This ORF clone has been cloned with normalized stop-codon. AttB recombination sites have been added to either end of the ORF and directionally cloned using the Gateway cloning system into pDONR 201. Additional sequences in the clone: 'ACC' before the 'ATG' (corresponding to ribosomal binding site and Kozak consensus sequences). Each clone is clonally isolated and full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /organism="synthetic construct"

RESULT 1
```

Claim 4; SEQ ID NO 5; 55pp; English.

The invention relates to novel isolated polypeptide (I) comprising an

New isolated SMAPK3 polypeptides and nucleic acids, useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SMAPK3 gene in a mammal.

                                                                                                                                                         9
                                                                                                                                                                             9
amino acid sequence selected from sequences comprising 335 or 359 amino acids (ADM12901 or ADM12903) or its fragments. The polypeptides and polymuclectides are useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SMAPK3 gene in a mammal. The fragments of the polypeptides and polymuclectides can also be used as primers or probes. This sequence corresponds to the cDNA encoding the SMAPK3V1 variant protein.
                                                                                                                                                                                                                                             ACGTGGGCCCGCGCTACACGCAGTTGCAGTACATCGGCGAGGGGCGCGTACGGCATGGTCA.

This represents the cDNA sequence of the human ERK-1, a mitogen-activated protein (MAP) kinase. The invention provides a method of inhibiting malignant neoplastic growth of epithelial or endothelial cell in a mammal which comprises administering to the mammal an effective amount of an oligonucleotide complementary to part of the mRNA for the MAP kinases, ERK-1 or ERK2 which is over-expressed in the mammal. Also provided is a method for identifying and monitoring potentially malignant neoplastic cells by measuring the levels of ERK1 and ERK2 mRNA in epithelial or endothelial cells and comparing it to the levels from normal cells of the same origin. Administration of the ERK1 and ERK2 antisense oligonucleotides (AAV62480 and AAV62481) to neoplastic endothelial or epithelial and endothelial malignancies including primary or metastatic cancers of e.g. the breast, prostate, other endocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AACTCCAAGGGCTATACCAAGTCCATCGACATCTGGTCTGTGGGCTGCATTCTGGCTGAG 722

Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

Claim 1; SEQ ID NO 1175; 114pp; English.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by (GCA), by detecting the level of expression of gene (s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the CC expression level to an expression level in an unactivated GC, where cd ifferential expression of Gs is indicative of GCA. Also included are differential expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a crisume, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) in a cample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation and agent that modulates the expression of gene(s) from Gs in the tissue. M1 correcting GCA, M2 is useful for detecting an inflammation with an inflammation in a tissue, M4 is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile corresponse of a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse in a subject to a pathogen or sterile corresponse of a subject to a pathogen or sterile inflammation in a tissue, M4 is useful for detecting an A 4604

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a method of predicting, diagnosing or prognosing a cardiovascular disease by detection of a polynuclectide in a biological ample comprises hybridising at least one of the polynucleotide to a nucleic acid material of a biological sample, thus forming a hybridisation complex, and detecting the hybridisation complex. The polynucleotides, polypeptides, antisense molecule, antibody and reagent are useful for preparing compositions for preventing, predicting or diagnosing, or a medicament for treating a cardiovascular disease, e.g. arteriosclerosis, ischaemia, angina pectoris, or myocardial infarction. This sequence represents a gene identified in the invention a being differentially regulated in individuals with cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GTGGGCCCGCGCTACACGCAGTTGCAGTACATCGGCGAGGGCGCGTACGGCATGGTCAGC 182

```
The present invention describes an isolated human PRO polypeptide (I).

Also described: (1) an isolated PRO nucleic (II) acid encoding (I); (2) a vector (III); (3) a notated PRO nucleic (II) acid encoding (II); (4) producing (II); (5) a chimmeric molecule (V) comprising (III); (4) producing (II); (5) a chimmeric molecule (V) comprising (II) in agoing (II); (4) producing (II); (5) a composition of matter comprising (II), which specifically composition of matter comprising (II), an agoinst of (II), or composition with a carrier; (8) (II), an antagonist of (II), or composition with a carrier; (8) (II), an antagonist of (II), an antagonist of (II), an antagonist of (II), an antagonist of (II), or the antibody (VII); (9) (11), an agoinst of (II), an antagonist of (II), or the antibody (VII); (9) (11), an agoinst of (II), and an antagonist of (II), or the antibody (VII); (9) (11) and antagonist of (II) and (II) and (II) at the same cell type; (I0) identifying a compound that inhibits the expression of a gene encoding (II) identifying a compound that inhibits the expression of a gene encoding (II); and (III) identifying a compound that inhibits to expression of a gene encoding (II); and (III) identifying a compound that inhibits antinament, dermatological, immunostimating the immune response in a mammal. (II) has useful for antinheumatic, dermatological, immunostimulant, immunosuppressive, costeopathic and vasotropic activities. (I) and (VII) are useful for treating mammal having an immune content for the polypeptide. (IVI) is useful for treating mammal having an immune content content sequence of (I) in a sample suspected of containing the presence of (II) in a sample suspected of containing the polypeptide. (IVI) is useful for treating mammal having an immune harmolytic anaemia, autoimmune or immune-immined skind diseases including bullous skind diseases, erythematomatic invented encodes a human PRO protein from the present invente invented invented anuman and protein from the present invented invented and an anamal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GAGGGGGTCGGCCCGGGGGTCCCGGGGAGAGTGGTGAAGGGGGAGCGGTTCGAC 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         243
